

"It's all Academic"

Driver's name: _____ Class: Modern/MG/Vintage (circle one)

Welcome to the 2024 Rallye Glenwood Springs Driving Tour! As you know there are big changes this year for the Rallye on Saturday, so to support the changes, we are focusing on a tour that is quicker than previous years by minimizing the number of clues to find as you drive and maximizing your general knowledge by having questions from topics that you can discuss as you drive. There are basically 3 types of questions: 1. Questions to answer as you navigate the tour while you learn about the educational options offered in Colorado, 2. General knowledge questions, and 3. Questions from academia. Please remember that there is a Rallye class and practice walking rallye being held at 4:30 in Glenwood Springs tonight and we want everyone to have every opportunity to participate - so lets get going!!!

There are "Did you know:" entries in this tour. These are interesting tidbits about the new rallye app we are using this year and other fun trivia things that you may need later or just find interesting. Please do not assume these entries will replace the content of the supplement to the Rallye General instructions - it is very important that you read the supplement in it's entirety if you are doing the rallye.

Reminder: Read everything in your packet.

NOTE: We do not take you on dirt roads!!!

This year's tour is multiple choice. Questions are in bold. Please circle the one best answer.

Did you know: A spacecraft in a circular, equatorial orbit of 205 km has a velocity relative to the earth of approximately 17,000 miles/hr and circles the earth about every hour and a half. This, for instance, may be a good altitude for a spy satellite. On the other hand, a spacecraft in a circular, equatorial orbit of 29,408 km above the earth has a velocity relative to the surface of earth of zero miles/hr and circles the earth every 24 hours. This is called a geosynchronous orbit and is a good place to park a communications satellite as it appears to hang in the sky and you don't have to keep moving your earth-based antenna.

Did you know: This year, rallyists will use the Richta Competitor App available for both Android and Apple devices. There are no traps. Your ability to stay exactly on time will be the determining factor in getting a good score. Simply register for the event using the app. This will load all checkpoint locations and timing information into the phone/tablet. Mount the phone in the car (with good visibility to sky), plug it into power (GPS will consume more power than normal). Then run the rally course! By the way, we will have MG-themed battery "bricks" for sale Friday and Saturday if you need supplemental power during the rallye.
